Dried Nuts
& Fruit

Walnut

WALNUT

Iran is the world's third-largest producer of walnuts and ranks second in terms of cultural area. Walnuts have been considered as one of the most significant and valuable dry and oil products.

One of the features of the exporting walnut is its extremely thin shell. Its kernel is fatty and not black, and when you eat it, you already taste a pleasant flavor.

Pistachio

PISTACHIO

One of VIRA GROUP's top exporting products with the highest level of customer satisfaction is pistachios. Pistachios are high in potassium, iron, calcium, Roy, copper, and sodium as well as vital vitamins including vitamin C. With the use of modern manufacturing technology, this company creates, packs, and sells the best pistachios in a variety of AHMAD AGHAEI, KALLE GHUCHI, FANDOGHI, and AKBARI .

Almond

ALMOND

Sweet almonds are a strong source of vitamin E, calcium, magnesium, potassium and iron which are useful for the body. Although almonds are a native product, they have been grown for a very long time in both Canada and America. However, the best type of sweet almond is cultivated in Iran. Types of almonds can include SANGI- MAMAEI-KAGHAZI.

Dried Dates

DRIED DATE

According to the storage conditions, dry dates are better for export to distant destinations. Compared to fresh dates, dried dates offer more calories and fiber and are higher in micronutrients. According to its climate, Iran is a top producer of dates, and Vira Group International Company gathers the best dates in an effort to meet consumer demands.

Dried Apricots

DRIED APRICOT

Among the top five nations that produce apricots Iran has been verified as a grate apricot cultivate with variety of ASGHARI, QAISI and NASIRI apricots. Because they're high in fiber, apricots can be included in a regular diet. Antioxidants and high fiber promote better digestive system function and facilitate easier digestion.

VIRA GROUP INTERNATIONAL COMPANY however assures the quality of the packing procedure for the customer's satisfaction.

Raisin

RAISIN

This company's appetizing offering is dried grape variant. Its nutrients are enhanced by the drying process, making it more advantageous than grapes itself. Due to VIRA's location in the product's primary geographic area and its connections with large raisin farmers, the product is dried using modern technology in a healthful manner. The main goal is to preserve the product's benefits and provide customers with the ideal experience when eating this product. The usual naming for different raisins are SABZ GALAMI, MAVIZ, TIZABI, AFTABI, TIGHI . The first two are the most popular raisin types.

Dried Fig

DRIED FIG

Iranian dried figs have a chewy texture and are incredibly sweet. With their rich fiber content and minerals, they provide an excellent nutritious boost for snacking. According to the fact that Viral Trade Group is located on the main geography of the product, the drying process is by using modern technology and in a healthy manner which gives excellent tasting

Sesame

SESAME

Sesame, one of the healthiest ingredients for the best cooking oil, also has uses in the cosmetic, pharmaceutical, and health sectors. The nations that use this oil seed place a great value on it. High-ranking farmers provide the sesame to the Vira organization, which collects them in charming packaging.

Saffron

SAFFRON

Saffron is a great plant with numerous health benefits, including the treatment of depression, improvement of memory, and decreased risk of certain cancers.

This product is regarded by many food industry companies in Iran as a main exporting good. Depending on the methods used for cultivation, saffron can be produced at varying quality levels.

Vira Group assists companies in achieving high-quality production by providing expert consultation in botanical and agricultural domains. Ultimately, the product's appealing and healthful packaging has contributed to our high customer satisfaction rates among domestic and foreign consumers.

Jujube

Jujube

Owing to the extensive jujube farming, the main habitat of this tree is not known correctly. However Iran ranks second in the world in terms of jujube cultivation and production.

This fruit has a high mineral content and is a strong source of vitamin C. Jujube fruit has extremely little fat overall. The important factor for dividing jujubes is to pay attention to their color, which is regarded as a crucial component in the separation process. The first kind of jujubes has a light brown color and a sizable core.

Jujubes with light colors have a sour and sweet flavor. The second variety has a tiny, delicate kernel and is colored like dark liver. This kind tastes extremely sweet.
